

TAQA

Questionnaire:

COVID-19 Passenger Screening for Den Helder Airport

ECM: 203969

Date: July 13th, 2020

Introduction

This questionnaire is part of a COVID-19 screening which takes place at Den Helder Airport and aims to at preventing COVID-19 contaminated personnel to visit Den Helder Airport and subsequently the offshore installation. Prior to embarkation, a number of checks will be performed at Den Helder Airport:

- Remote body temperature measurements are taken. In case the body temperature measures above 38 degrees °C, access to the flight will be denied;
- Medical personnel will take a nose swap. The swap will be analysed for COVID-19 at an off-site laboratory. The result will be available within 24 hours.

The personal information asked in section 1 of this questionnaire is required to register you for the COVID-19 testing. The citizen service / passport number is mandatory, as in the Netherlands Corona is a mandatory reportable sickness.

1 day prior to your offshore trip you will receive a confirmation e-mail of your registration. **Please ensure you are able to show this registration form, either by hard copy or phone.** The barcode listed on the registration form will be scanned after your swap has been taken. The results are communicated to you personally either via a dedicated app (installation details can be found on the registration confirmation).

In order to protect your health, the health of your co-workers and to prevent a mandatory isolation of an offshore location, you are requested to answer the questions in section 2 of the questionnaire which is based on the NOGEPA procedure¹.

Note: TAQA will not keep any records of the personal information provided. Your information will be handled under confidentiality (according to Dutch AVG regulations).
